

GE-P80 Bruckenleger auf PzKpfw IV D Ausf D (Armoured BridgeLayer)

This does exactly what it says on the tin, it was a wooden tread way bridge mounted on steel girders.

In game terms to create a bridge over a linear obstacle, the vehicle must conform to the obstacle and perform an engineering action. The bridge is then emplaced. Other units can use it by conforming to the obstacle and then performing a breach action. No bog-down check is needed to traverse bridged obstacles. A unit must execute a breaching action to cross a bridge. The bridge is considered a defile for triggering opportunity fire.

GE-P81 Panzer I Charge Laying Tank. "Ladungsleger auf PzKpfw I Ausf A/B"

This was a prototype vehicle used during the 1940 campaign in the West and there were supposed to be ten vehicles issued in the Armoured Panzer Pioneer company, but only three vehicles were issued to 1st Panzer Div. The charge had 50Kg of HE.

In game terms the vehicle drives up to the obstacle spends an engineering action laying the charge and then drives away to a safe distance, it then spends a demolition action to detonate the charge. It will clear any linear obstacle including wire.
