NATO’s LANDSOUTH (Allied Land Forces Southern Europe) Command, headquartered at Verona, was responsible for the defence of north-eastern Italy against a Warsaw Pact drive through Yugoslavia or Austria. LANDSOUTH was commanded by an Italian four-star general and was subordinate to the US-led AFSOUTH, headquartered at Naples.

Officially, only the Italian 3rd, 4th & 5th Corps were under LANDSOUTH command, though it is reasonable to presume that Territorial Command forces would also be committed to LANDSOUTH in the event of an invasion of Italy (see the full Italian Army order of battle below).

Following Spain’s accession to NATO in 1982, the Spanish Army was formally committed to providing a corps of two divisions plus support to LANDSOUTH. However, there were no permanent structures in place and no exercises were conducted to test this commitment, so the exact composition of the proposed Spanish Corps is unknown. Spain also made an informal commitment to send its sole Armoured Division (the Brunei Armoured Division) to West Germany in the event of a war with the Warsaw Pact, so it seems unlikely that this would form part of any Spanish Corps commitment to LANDSOUTH and therefore leaves a Motorised Division, a Mechanised Division and two Mountain Divisions to choose from (see the Spanish TO&Es).

The Allied Command Europe (ACE) Mobile Force (Land) (or AMF(L) for short) was a British-led, multi-national rapid-reaction brigade that could in theory be deployed within a matter of days to reinforce a threatened state within the NATO area of interest. The most likely option for a deployment by AMF(L) to the ‘Southern Flank’ is shown here – the ‘Northern Flank’ option had a very different composition. However, note that there was considerable overlap in the command and logistical structure for each flank option, as well as the supporting Air and Sea components, so it would be very difficult for both flank options to be fully deployed simultaneously. Note also that there was no guarantee that AMF(L) would be deployed to Italy; the most likely option was Turkey. Nonetheless, AMF(L) did hold regular exercises in Italy. Note that each battlegroup would bring organic artillery, aviation and other combat support elements with it.

The US 3-325th Parachute Infantry Battalion was permanently based in Vicenza, Italy. However, it reported to two masters, being simultaneously committed to both LANDSOUTH and AMF(L). AMF(L) ‘Southern Option’ missions would have taken priority over LANDSOUTH.
Italian Army 1980-1989 (a)

- 3rd Army Corps (Milan)

- x3 SM-1019 Observation Aircraft CWIT-52

Carabinieri Command (b)

(a) In 1986, a wide-ranging reorganisation saw the disbandment of Divisions, with all Brigades becoming independent and reporting directly to the Corps HQs.

(b) The Carabinieri are Italy’s paramilitary gendarmerie. In wartime, the Carabinieri would mainly have been allocated to rear-area and local defence, though some elements (mainly the armoured and parachute units) served under the regular Army command structure.

(c) One squadron of x3 AB-205s spent much of the 1980s assigned to UN peacekeeping forces in Lebanon. From 1988 all these AB-205 (Italian-built UH-1H Iroquois) helicopters were upgraded to the more capable AB-412 model, though only two of the five squadrons had been re-equipped by the end of 1989. From 1988: May therefore replace up to x6 AB-205 with:

- AB-412 Utility Helicopter CWIT-49

(d) The V Territorial Corps at Padua had no significant combat units assigned in peacetime beyond a few signals and transport units. It would probably have been filled out during wartime with the call-up of reservists.

(a) The 3rd Corps was stationed mainly in the north-west of Italy and was the army’s mobile reserve.

(b) The Centauro Division held the historical title of ‘Armoured’, though was in fact a Mechanised Division. With the disbandment of the division in 1986, the Curtatone Armoured Brigade was renamed Centauro in order to keep the famous name in service.

(c) Some sources show x2 SP Field Artillery Regiments, but this is because the Italian Army began disbanding units very rapidly as soon as the political situation started to swing against the communists in late 1989. Consequently some were already disbanded by the end of 1989 and are not listed in these sources.

(d) These Field Artillery Regiments were equipped with FH-70 155mm Howitzers.

(e) The Italian Army actually referred to 155mm artillery as Heavy Artillery. However, to save confusion we’ve stuck with the US/UK convention of referring to 155mm as Field Artillery and anything heavier as Heavy.

(f) The Portuguese 1st Independent Mixed Brigade was committed to joining LANDSOUTH during mobilisation for war with the Warsaw Pact. It was to come under 3rd Corps.

4th (Alpini) Army Corps 1980-1989

(a) 4th Corps was mainly stationed in the north-east of Italy and was responsible for defending the Alpine approaches into Italy from Austria and Yugoslavia, and to a lesser extent, Switzerland, thus covering the left flank of the 5th Corps as it conducted a fighting withdrawal into the North Italian Plain.

(b) The Orobica Brigade had a highly classified wartime mission: In the event of a Warsaw Pact invasion of Austria, there was a secret agreement that the brigade would advance into Austria along with the West German 23rd Gebirgsjäger Brigade, to assist in the defence of that country.

(c) The Taurinense Brigade was the 4th Corps' reserve formation and was stationed in Turin, near the French border. Its primary role was to assist in halting deep penetrations of northern Italy and as a last resort, to assist French Alpine units in preventing a Soviet breakthrough from Italy into France. It was also tasked with providing an Alpini Battalion and other support elements (plus some from the Folgore Parachute Brigade) to the Cuneense Detachment, which was Italy's contribution to AMF(L)'s 'Northern Option'.

(d) This Carabinieri Armoured Battalion was equipped with M47 tanks throughout the 1980s.

(e) This armoured unit was equipped with Leopard 1A2 tanks and M113 APCs (one source from 1984 says VCC-2 APCs).

(f) Three of these Pioneer Companies were designated as mining companies and did not have Leopard engineering vehicles or APCs. The remaining three Pioneer Companies did have Leopard engineering vehicles, but no APCs.

(g) This SP Artillery Group was disbanded with the 1986 reorganisation.

(h) These Field Artillery Groups (of the 4th Field Artillery Regiment) were equipped with FH-70 155mm Howitzers.

(i) The Italian Army actually referred to 155mm artillery as Heavy Artillery. However, to save confusion we've stuck with the US/UK convention of referring to 155mm as Field Artillery and anything heavier as Heavy.
The 5th Corps was stationed in the north-east of Italy and held the bulk of Italy’s land combat power. Its primary role was to defeat an attack by Warsaw Pact (and/or Yugoslav) forces into Italy via Yugoslavia or Austria. In 1986 the Corps was reorganised, with divisional HQs being disbanded and all brigades reporting directly to Corps HQ.

The Trieste Command was created shortly after WW2, with the primary role of defending the disputed city of Trieste against Yugoslavian ambitions. However, tensions with Yugoslavia were reduced with time and as a consequence, the Trieste Command was steadily reduced in strength. Tensions eased even further following the Yugoslav dictator Tito’s death in 1980 and the Trieste Command was finally disbanded during the 1986 reorganisations.

Three of these Pioneer Companies were roled as miners/tunnellers and therefore lacked AFVs, including Leopard engineering vehicles. The remaining six companies had Leopard Pioneer tanks and bridgelayers.

The Aquilea Missile Brigade also included heavy (nuclear-capable) artillery units.

This Carabinieri Armoured Battalion was equipped with Leopard tanks throughout the 1980s.
The 5th Corps was stationed in the north-east of Italy and held the bulk of Italy’s land combat power. Its primary role was to defeat an attack by Warsaw Pact (and/or Yugoslav) forces into Italy via Yugoslavia or Austria.

With the disbandment of divisions in 1986, the titles of the historically-significant Ariete and Mantova Divisions were preserved by re-naming the Manin Armoured Brigade as Ariete and the Isonzo Mechanised Brigade as Mantova.

This Carabinieri Armoured Battalion was equipped with Leopard tanks throughout the 1980s.

Three of these Pioneer Companies were roled as miners/tunnellers and therefore lacked AFVs, including Leopard engineering vehicles. The remaining three companies had Leopard Pioneer tanks and bridgelayers.

These Pioneer Companies were equipped with M113 APCs, having previously been the divisional pioneers for the disbanded Armoured and Mechanised Divisions.

Four of these Artillery Groups was equipped with FH-70 155mm Howitzers, while the fifth was equipped with M114 155mm Howitzers. Note that the Italian Army refers to these as Heavy Artillery, though we’ve adhered to the US/UK convention of referring to 155mm guns as Field Artillery, with 175mm and 203mm being Heavy Artillery.

In the late 1980s, the 5th Corps’ Aviation Command was preparing to receive its first squadron of A-129 Mangusta Attack Helicopters, the first squadron of which was formed in 1990. Prototype Mangusta had been on field trials with 5th Corps since 1986, so in the event of a war in the late 1980s, it’s not totally beyond the realms of possibility to add a single flight of attack helicopters:

- Up to x6 A-129 Mangusta Attack Helicopter CWIT-51

The Vittorio Veneto Brigade was changed from Armoured to Mechanised during the 1986 reorganisations.
The primary role of Territorial Commands was to coordinate, train, equip and organise new formations that would be created from a mass call-up of reservists (the first tranche of whom would immediately double the size of the army, with the remainder then tripling the peacetime strength of the army). Consequently, many of the Commands shown here look somewhat empty, but given time, these would become new Army Corps, albeit with largely obsolete equipment. Regular army units not assigned to the permanent Army Corps were also usually assigned to Territorial Commands.

The V Territorial Command had no significant combat units in peacetime, beyond a few signals and transport units.

These Field Artillery Groups are equipped with M114 155mm Howitzers.

The Piemonte Brigade only existed as a small cadre in peacetime and was to be formed on mobilisation from the Aosta Alpine Training School, volunteers and called up reservists. As it contains some Alpini elements it is sometimes referred to as an Alpini Brigade.

These are artillery training units. Some of them would have gone to the Lazio Brigade on mobilisation.

One of these Field Batteries was equipped with M114 155mm Howitzers and the other was equipped with FH-70 155mm Howitzers.

May replace AB-47 Light Observation Helicopters with:

AB-406 Light Observation Helicopter、CWIT-45

The Lazio Brigade only existed as a small cadre in peacetime, but would be formed immediately on mobilisation from a regular armoured unit 9Leopard), a regular mechanised unit and various armour, mechanised, artillery and pioneer training units within VIII Territorial Command, as well as called-up reservists.

The number of Training Battalions in the Territorial Commands increased following the 1986 reorganisations, as responsibility for training units mainly passed from the front-line formations to the Territorial Commands (use the higher number from 1986 onward).

These units were formed after the 1986 reorganisations.

These are pioneer training units.

The MRL Training Battery was formed in 1987.
The primary role of Territorial Commands was to coordinate, train, equip and organise new formations that would be created from a mass call-up of reservists (the first tranche of whom would immediately double the size of the army, with the remainder then tripling the peacetime strength of the army). Consequently, many of the Commands shown here look somewhat empty, but given time, these would become new Army Corps, albeit with largely obsolete equipment. Regular army units not assigned to the permanent Army Corps were also usually assigned to Territorial Commands.

(b) The Puglie Armoured Brigade existed only as a small cadre in peacetime, though would be formed immediately upon mobilisation from two armoured training units (equipped with obsolete M47 tanks and M113 APCs) and other elements within X Territorial Command, as well as called-up reservists.

(c) These Field Artillery Groups are equipped with M114 155m Howitzers. Prior to 1986 there was only x1 Field Artillery Group in X Territorial Command, increased to x3 with the 1986 reorganisations. One of these would be assigned to the Lazio Armoured Brigade.

(d) May replace AB-47 Light Observation Helicopters with: AB-406 Light Observation Helicopter CWIT-45

(e) These armoured units had only x1 Armoured Squadron (Leopard) apiece and the infantry component was equipped with M113 APCs. The SP Field Artillery Battery and AB-47 Helicopter Squadron was also under their command. One unit was manned permanently, while the second unit would be formed during mobilisation for war.

(f) From 1988, most of these assets were combined as a ‘heavy’ Reserve Motorised Brigade entitled the Motorised Brigade Sassari. As the organisation would be radically different to a standard Motorised Brigade, I have not included it in the Motorised Brigade TO&E (BG CWIT-05).

- BATTLEGROUP CWIT-07
  - Parachute Brigade Folgore

- BATTLEGROUP CWIT-05
  - Motorised Brigade Friuli

- ARMY AVIATION ASSETS
  - 1st Army Aviation Group Antares

- BATTLEGROUP CWIT-22
  - Marine Infantry Battalion San Marco

(a) The Italian Rapid Intervention Force was formed in 1986 from the above-named units. Note however, that this was not a permanent grouping – they would only be brought together for training and in the event of the deployment of the Force.

(b) These units only existed as small cadres in peacetime. They would be filled out by reservists during mobilisation for war.

(b) In wartime these units would be broke up into unit attachments to provide close air defence for Battlegroups (the Alpini and Parachute Brigades were the only formations with their own organic air defence units).

(c) This infantry training unit would provide close security for the Command’s sub-units.
Each Carabinieri ‘Legion’ comprised x3 to x6 battalion-equivalent ‘Groups’. I don’t have any organisational information on these Groups, but assume that in wartime they would have been somewhat similar in organisation to Army Infantry Training Battalions, though lacking in heavy weapons. They would have been primarily responsible for rear-area security, but would also supplement regular and Territorial Command troops in local defence.

(b) The XI Brigade was the main Carabinieri striking force. However, it appears to have been merely an administrative command and not a unified field brigade. It seems that the Mobile Battalions were spread evenly across the country as rapid-reaction units to support the Carabinieri Legions.

(c) The two Carabinieri Armoured Battalions were permanently assigned to the 4th and 5th Army Corps.

(d) The Special Units included the Presidential Guard, marine units and various others.

(e) The Parachute Battalion was permanently assigned to the Folgore Parachute Brigade.
The Allied Command Europe (ACE) Mobile Force (Land) (or AMF(L) for short) was a multi-national rapid-reaction brigade that could in theory be deployed within a matter of days to reinforce a threatened state within the NATO area of interest. There were also Sea and Air components. In all, fourteen NATO member states supplied forces to AMF, though the main contributors of ground combat units to AMF(L) were the UK, Canada, USA, West Germany, Italy, Belgium, Spain and Luxembourg. Logistical limitations meant that only part of this force could be brought to bear in one spot, so each nation was given areas of responsibility. The most likely operational areas for AMF(L) were the ‘Southern Flank’ (most likely Italy or Turkey) and the ‘Northern Flank’ (most likely Norway). The most likely orbit for each flank is shown here. Note that there was considerable overlap in the command and logistical structure for each flank, as well as the supporting Air and Sea components, so it would be very difficult for both ‘options’ to be fully deployed simultaneously.

Command for AMF(L) was exercised by the UK, who supplied the major part of the headquarters element, as well as the combat support arms shown here.

The ‘Northern Option’ forces all had considerable quantities of Arctic warfare equipment and vehicles stored in Norwegian depots. The Italian Army would provide an Alpini Battalion and an antitank company from the Taurinense Brigade (4th Corps), along with artillery and other supporting elements from the Folgore Parachute Brigade. This combined group was entitled the Cuneense Detachment.

This British Engineer Field Squadron had softskin transport in lieu of APCs.

From 1983: Replace with British Medium Recce Squadron (Tracked UK) (ME CWBR-03d).

While I have good orbit information for the British, Canadian, West German, Italian and Luxembourg contingents, it is not clear what supporting arms the other national contingents would have brought with them. Most contingents certainly included airborne artillery and these would probably become brigade-level assets, alongside the British artillery.

The US 3-325th Parachute Infantry Battalion was permanently based in Vicenza, Italy. However, it reported to two masters, being simultaneously committed to both LANDSOUTH and AMF(L). AMF(L) ‘Southern Option’ missions would probably have taken priority over LANDSOUTH.
In 1986 the divisions were disbanded, with the Independent Brigade now becoming the basic formation of manoeuvre, with each reporting directly to a Corps HQ (many other NATO armies have since adopted a similar organisational structure).

The Ariete Armoured Division, as Italy’s only Armoured Division, formed part of 5th Corps, which was the main armoured striking force and was stationed in north-eastern Italy.

Genio Guastatori are armoured assault pioneers.

These Light Anti-Aircraft Batteries were not organic to the division. They would be attached to each formation from the centralised Army Anti-Aircraft Artillery Command.

At the very start of the 1980s, these Field Artillery Regiments were actually self-propelled and equipped with M109s as per FSE CWIT-02. However, they were already in the process of re-equipping to towed FH-70 155mm Howitzers and this process was completed by 1981. This then allowed the Brigades to re-equip with M109s.

Position Infantry Battalions were tasked with defending mountain fortress positions within the formation’s area of responsibility.
In 1986 the divisions were disbanded, with the Independent Brigade now becoming the basic formation of manoeuvre, with each reporting directly to a Corps HQ (many other NATO armies have since adopted a similar organisational structure).

The Centauro Armoured Division (Mechanised) was assigned to 3rd Corps, while the Mantova and Folgore Mechanised Divisions belonged to 5th Corps. (N.B. do not confuse the Folgore Mechanised Division with the Folgore Airborne Brigade – or for that matter, the Folgore antitank weapon!).

The Joint Amphibious Landing Command belonged to the Folgore Mechanised Division and was primarily organised around the Lagunari, who are the Italian Army’s own ‘Marine Corps’. Equipped with LVTP-7 amphibious landing vehicles and other armoured vehicles, their role was to protect the right flank of 5th Corps in the lagoon areas of Venice and Grado. On paper, this brigade looks very weak, but the ‘secret ingredient’ is the Italian Navy’s San Marco Marine Battalion, which is organised and equipped very similarly to the Lagunari and can be easily slotted into the brigade as required by the mission (hence ‘Joint’).

Genio Guastatori are armoured assault pioneers.

These Light Anti-Aircraft Batteries were not organic to the division. They would be attached to each formation from the centralised Army Anti-Aircraft Artillery Command.

At the very start of the 1980s, these Field Artillery Regiments were actually self-propelled and equipped with M109s as per FSE CWIT-02. However, they were already in the process of re-equipping to towed FH-70 155mm Howitzers and this process was completed by 1981. This then allowed the Brigades to re-equip with M109s.

Position Infantry Battalions were tasked with defending mountain fortress positions within the formation’s area of responsibility. The Folgore Mechanised Division had 1 such battalion (and only 1 Infantry Training Battalion).
(a) This TO&E shows the organisation of Armoured Brigades prior to the 1986 reorganisation, when divisions were disbanded and all brigades became independent formations.

(b) Reserve Armoured Brigades raised during mobilisation such as the Puglie Armoured Brigade would probably have a lower number of tanks. In which case, replace the Tank Battalions with Armoured Battalions (BG CWIT-11). They might also have a single SP Artillery Battery (FSE CWIT-03) instead of a full SP Artillery Group.

(c) Note that some Mechanised ‘Infantry’ Regiments held historical cavalry regimental titles (e.g. the Genova Cavalleria which was the Mechanised Regiment assigned to Pozzuolo del Friuli Armoured Brigade). This cavalry title was merely historical and does not indicate that they were reconnaissance troops or armour.

(a) This TO&E shows the organisation of Armoured Brigades prior to the 1986 reorganisation, when divisions were disbanded and all brigades became independent formations.

(b) Reserve Armoured Brigades raised during mobilisation such as the Puglie Armoured Brigade would probably have a lower number of tanks. (a) Note that some Mechanised ‘Infantry’ Regiments held historical cavalry regimental titles (e.g. the Genova Cavalleria which was the Mechanised Regiment assigned to Pozzuolo del Friuli Armoured Brigade). This cavalry title was merely historical and does not indicate that they were reconnaissance troops or armour.

(b) The only Mechanised Brigade to have a Motorised Infantry Battalion assigned to it was the Vittorio Veneto Mechanised Brigade (from 1986 onward). This battalion was the remnant of the disbanded Trieste Command.

(c) Position Infantry Battalions were tasked with defending mountain fortress positions within the formation’s area of responsibility. The Gorizia and Isonzo Mechanised Brigades each had x2 such battalions and the Vittorio Veneto Brigade also acquired one during the 1986 reorganisations (this was the Position Infantry Battalion formerly assigned to the disbanded Ariete Armoured Division).

(d) At the start of the 1980s, all Mechanised Brigades had a towed Field Artillery Group (FSE CWIT-04). However, the replacement of divisional SP Artillery Groups with towed artillery in 1980-81 meant that SP artillery was cascaded down to Mechanised Brigades. Therefore, from 1981 in Garibaldi, Gorizia and Goito, Mechanised Brigades: replace the Field Artillery Group with a Self-Propelled Field Artillery Group (FSE CWIT-02). The Isonzo Mechanised Brigade (which became the Mantova Brigade in 1986) also upgraded sometime around 1984/85 and the Vittorio Veneto retained its SP artillery when it converted from an Armoured Brigade to a Mechanised Brigade in 1986.

(e) Training Battalions were only found in the Granatieri di Sardegna and Pinerolo Brigades.

   - AR-59/AR-76 ‘Campagnola’ (no MG)  CWIT-24

(b) In the Piemonte Reserve Motorised Brigade and Trieste Command: Delete the Armoured Battalion and the Antitank Company.

(c) The Acqui Motorised Brigade had x4 regular Motorised Infantry Battalions. The Cremona and Friuli Motorised Brigades meanwhile, each had three regular Motorised Battalions and a fourth reserve battalion that would be formed during mobilisation for war.

(d) The Trieste Command had only x1 regular Motorised Infantry Battalion, plus x2 reservist battalions that would be raised during mobilisation for war, for x3 Motorised Battalions in total.

(e) The Aosta Motorised Brigade had x3 regular Motorised Infantry Battalions.

(f) The Piemonte Reserve Motorised Brigade would form x3 Motorised Infantry Battalions during mobilisation for war. This included one battalion raised from the Aosta Alpini School.

(g) Only the Trieste Command had an organic Aviation Squadron.

(h) From 1988, virtually the entire Sardinia Territorial Command was reorganised as the new Sassari Motorised Brigade. However, the organisation would have been radically different to that shown here – heavier than a standard Motorised Brigade, but weaker than a Mechanised Brigade. See the Sardinia Territorial Command orbat for details.

(i) The Parachute Light AA Battery and Parachute Field Artillery Group were only found in the Friuli Motorised Brigade following that formation’s incorporation into the new Rapid Intervention Force in 1986.
The Alpini Brigades varied quite widely in strength, depending on location and role. The strongest was the Julia Brigade, with 5 Alpini Battalions. The Cadore, Orobita and Taurinense Brigades each had 3 Battalions, while the Tridentina Brigade initially had 2 Battalions, though this was increased to 3 Battalions following the 1986 reorganisation. One battalion in most brigades was a Training Battalion, but these were organised the same as the regular battalions and were led by elite Alpini instructors, so it's doubtful that these would have been any less proficient than the regular battalions.

The Julia and Tridentina Brigades each included a very large Alpini Position Infantry Battalion that would have held the fortifications of the ‘Alpine Wall’. Each of these battalions had 2 regular companies and a truly whopping 14 reserve companies that would have been formed during mobilisation for war.

The Alpini Light AA Battery belonged administratively to one of the brigade’s two Alpini Artillery Groups, though was tactically deployed forward as a Manoeuvre Element or as unit attachments to the brigade’s battlegroups.

The Julia Brigade’s Alpini Artillery component was unusually large, having one 105mm Alpini Artillery Group with 5 Batteries and a second such Group with 3 Batteries, in addition to the 155mm Field Artillery Group.

The Field Artillery Groups were equipped with M114 155mm Howitzers. Some sources suggest that in the early 1980s, they only had 1 Field Battery (FSE CWIT-05), which was part of the Alpini Artillery Group. However, by the mid-1980s there was a full Group of 3 Field Batteries present in each Alpini Brigade. Note that these were actually titled Alpini Artillery Groups, but they were essentially identical to standard towed 155mm Field Artillery Groups, so I've used that title for simplicity’s sake.

The Taurinense Brigade was tasked with providing 1 Alpini Infantry Battalion and the Brigade Anti-tank Company to the Cuneense Detachment, which along with elements from the Folgore Parachute Brigade (mainly artillery), was Italy’s contribution to the AMF(L) ‘Northern Option’.
The Folgore Parachute Brigade was Italy’s only airborne formation. The only other parachute unit on the Italian order of battle was the independent Alpini Parachute Company. Combat support elements of the Folgore Parachute Brigade (chiefly artillery) were dedicated to the Cuneense Detachment, which would be assigned to AMF(L) ‘Northern Option’ deployment.

From 1982 the Parachute Training School was designated as a reserve Parachute Infantry Battalion and in wartime would be added to the brigade’s order of battle.

The Carabinieri Parachute Battalion was a multi-role, rapidly-deployed paramilitary police unit, which could double as a parachute infantry regiment in wartime.

The 9th Parachute Assault Battalion Col Moschin was lightly-equipped, being a light reconnaissance/raiding/special forces unit.

The Reconnaissance Company is not mentioned in all sources and its inclusion might be an error.

(a) The only units permanently assigned to the Joint Amphibious Landing Command were the 1st Lagunari Infantry Battalion Serenissima and the Lagunari Amtrack Battalion Sile. Such a small force would not normally warrant a large headquarters and logistical support structure, but this was established in order to allow the Navy’s Marine Battalion San Marco, as well as naval vessels, to seamlessly operate as part of the Command on an ad hoc basis.

(b) The Lagunari are the Italian Army’s own ‘marine corps’, responsible for operating in the lagoons and shallow coastline around Venice and the northern Adriatic. They are organised and equipped in a very similar manner to the Navy’s Marine Battalion San Marco, which of course aids interoperability as part of a Joint Command.

ATTACHMENTS
Organic Fire Support
x1 M30 107mm Mortar (c) CWIT-36

Transport
x1 M106 107mm Mortar Carrier (c) CWIT-11

x6 M40A1 106mm Recoilless Rifle (de) CWIT-42

Transport
x6 AR-59/76 Campagnola (no MG) (e) CWIT-24

(a) Italy had ample supplies of M113, VCC-1 and VCC-2 APC variants to equip all of its regular and first-line reserve forces throughout the 1980s. However, it held enough obsolete AMX-VCI APCs in storage to equip around 20 Mechanised Infantry Companies. May therefore replace all APCs and armoured heavy weapons carriers in some late-mobilisation reserve units with:
AMX-VCI Armoured Personnel Carrier CWIT-17

(b) The Mechanised Companies of the Armoured Battalions were never equipped with anything better than M113 Armoured Personnel Carriers – they did not receive VCC-1 or VCC-2. They also do not appear to have received Milan ATGMs to replace their recoilless rifles.

(c) Late 1980s: May replace 107mm Mortar and M106 Carrier in some units with:
x1 Brandt 120mm Mortar CWIT-37
x1 M106A1 120mm Mortar Carrier CWIT-15

(d) It does not appear that Armoured Regiments ever received Milan ATGMs.

(e) 106mm recoilless rifles may be fired from AR-59/76 jeeps when mounted.
(a) The 7th *Carabinieri* Armoured Battalion, which was assigned to 4th Corps, persisted with obsolete equipment – M47 Patton tanks and M113 APCs. However, the 13th *Carabinieri* Armoured Battalion, which was assigned to 5th Corps, had distinctly more modern Leopard 1A2 tanks and VCC-2 APCs.

(b) Late 1980s: Replace 107mm Mortar and M106 Carrier in the 13th *Carabinieri* Armoured Battalion (5th Corps) with:

- 1 Brandt 120mm Mortar
- 1 M106A1 120mm Mortar Carrier

(c) Mid-1980s: Delete 3 of the 6 M40 106mm Recoilless Rifles and add:

- 3 Milan ATGM Team
- 3 AR-59/76 Campagnola

(d) 106mm recoilless rifles or Milan ATGMs may be fired from AR-59/76 jeeps when mounted.

(e) Late 1980s: May upgrade Milan ATGMs with Milan 2 (see card).

- **Command**
  - x1 Commander

**MANOEUVRE ELEMENTS**
- **MANOEUVRE ELEMENT CWIT-09**
  - x3 to x16 *Alpini* Infantry Company (a)

(a) There were five such battalions in the Italian order of battle and they varied enormously in size, depending on the terrain and fortifications that they were intended to defend. They were expected to fight from fixed positions with numerous heavy weapons of all types. The *Alpini* Infantry Company ME (minus the vehicle transport) is probably the closest match, but only gives a rough approximation of how they might have been organised and equipped – each company was probably different and purely organised according to the fortification it had to defend.
**MANOEUVRE ELEMENT CWIT-03**

(a) Italian infantry had no MAW until the delayed introduction of the Folgore 80mm AntiTank Rocket Launcher in 1986. Even then, as a consequence of the slow delivery of Folgore, the Italian Army made an emergency purchase of the French APILAS anti-tank rocket system and by 1989 the Italian Army had 800 Folgore and 500 APILAS. Late 1980s: May therefore equip up to x3 Infantry units in the Company with Folgore or APILAS (see card).

(b) Early 1980s: Replace Recoilless Rifle with: Milan ATGM Team CWIT-39
 Late 1980s: Upgrade Milan ATGM Teams to Milan 2 ATGM (see card).

BATTLEGROUP CWIT-23
- x1 Infantry Training Battalion (c)
  - x4 Motorised Infantry Company (c)

MANOEUVRE ELEMENT CWIT-08
- x1 Pioneer Company

(a) The 175mm Heavy Regiment was transferred to the 5th Corps Artillery Command in 1986 when it lost its nuclear role.

(b) A source from 1984 shows two towed Heavy Artillery Groups present, but only one in 1986. These were in any case, transferred to the 5th Corps Artillery Command during the 1986 reorganisations.

(c) This Infantry Training Battalion’s wartime role, along with the four independent Motorised Infantry Companies, was to provide local security for the Lance missiles, their nuclear warheads and the 203mm nuclear artillery ammunition.

FIRE SUPPORT ELEMENT FSE CWIT-04
Field Artillery Group (b)

- x3 Field Artillery Battery
  - On-Table Attachment
    - x2 Forward Observer
    - x2 AR-59/76 ‘Campagnola’ (no MG)
  - Fire Support
    - x3 M114 155mm Howitzer (a)

(a) May replace M114 155mm Howitzer in some units with: FH-70 155mm Howitzer

(b) Note that Field Artillery Regiments belonging to Alpine Brigades are officially classed as Alpini Artillery, even though they are equipped exactly the same as regular Field Artillery. Note that during the early 1980s, there seems to have only been x1 such battery present in each Alpini Brigade, though this was soon expanded to the full Group as shown here.

FIRE SUPPORT ELEMENT FSE CWIT-06
Alpini Artillery Group (ab)

- Command
  - x1 Commander
- HQ
  - x1 AR-59/76 ‘Campagnola’ (no MG)

103rd Fighter-Bomber Squadron x9 G-91 R/1 ‘Gina’ (ab) CWIT-54

3rd Wing Carlo Emanuele Buscaglia (Verona-Villafranca AFB)
28th Reconnaissance Squadron x9 RF-104G Starfighter CWIT-53
232nd Reconnaissance Squadron x9 RF-104G Starfighter CWIT-53

4th Wing Amedeo d’Aosta (Grosseto AFB)
9th All-Weather Interceptor Squadron x6 F-104S Starfighter CWIT-53
20th All-Weather Interceptor Squadron (c) x6 TF-104G/F-104S Starfighter CWIT-53

5th Wing Giuseoppe Cenni (Rimini-Miramare AFB)
23rd All-Weather Interceptor Squadron x6 F-104S Starfighter CWIT-53
102nd Special Fighter-Bomber Squadron (d) x9 F-104S Starfighter CWIT-53

6th Wing Alfredo Fusco (Ghedi AFB) (Formed in 1982 with Tornado IDS)
154th Special Fighter-Bomber Squadron (d) x9 Tornado IDS CWIT-56
155th Special Fighter-Bomber Squadron (d) x9 Tornado IDS CWIT-56

8th Wing Gino Priolo (Cervia AFB)
101st Fighter-Bomber Squadron x9 G-91 Y ‘Gina Yankee’ CWIT-55

9th Wing Francesco Baracca (Capua-Grazzanise AFB)
10th All-Weather Interceptor Squadron x6 F-104S Starfighter CWIT-53

32nd Wing Armando Boetto (Brindisi AFB)
13th Fighter-Bomber Squadron x9 G-91 Y ‘Gina Yankee’ CWIT-55

36th Wing Helmut Seidt (Gioia del Colle AFB)
12th All-Weather Interceptor Squadron x6 F-104S Starfighter CWIT-53
156th Special Fighter-Bomber Squadron (de) x6 F-104S Starfighter CWIT-53

37th Wing Cesare Toschi (Trapani-Birgi AFB)
18th Interceptor/Fighter-Bomber Squadron x9 F-104S Starfighter CWIT-53

51st Wing Ferruccio Serafini (Treviso-Istrani AFB)
22nd All-Weather Interceptor Squadron x6 F-104S Starfighter CWIT-53

53rd Wing Gugliemo Chiarini (Camerini AFB)
21st All-Weather Interceptor Squadron x6 F-104S Starfighter CWIT-53

(a) Some sources show the 2nd Wing (‘Gruppo’) as being equipped with G-91 Y ‘Gina Yankees’. However, this does not appear to have been the case, as there is ample evidence of them still having G-91 R/1 in 1989.

(b) Late 1980s: The 103rd Squadron (‘Stormo’) was withdrawn from front-line service and transferred to the 51st Wing in order to re-equip with the new AMX light ground-attack aircraft, which came into front-line service during the early 1990s.

(c) These were Operational Conversion Units with a mix of single and twin-seat fighters. In wartime they would become front-line fighting units.

(d) ‘Special’ Fighter-Bomber units were roled to carry ‘Special’ weapons: i.e. nuclear weapons.

(e) The 156th Squadron converted to Tornado IDS in 1984.

(f) In wartime the bulk of the Italian Air Force would become subordinate to NATO’s AIRSOUTH Command and would be reinforced by elements of NATO air forces, most notably the US, Spanish and Portuguese Air Forces, as well as any air assets attached to AMF. The US 16th Air Force in particular, maintained three permanent air bases in Italy and in the late 1980s had a wing of Ground-Launched Cruise Missiles permanently stationed in Italy. It only had a single wing of Spanish-based F16s permanently assigned, though could expect massive reinforcement from US-based units during mobilisation for war.

(a) These training units were last-phase fast jet training units, where pilots were trained to use their aircraft as weapons. Their aircraft were fully combat-capable and in wartime would become combat units.

(b) The G-91 T was the twin-seat version of the G-91 R/1. Use the G-91 R/1 card CWIT-54.

(c) This unit was, as the name suggests, a tri-national (British, German and Italian) unit to train aircrew on the Tornado aircraft. In wartime it would either be used to reinforce front-line Tornado units or might be used as a Tornado squadron in its own right.

(d) This was the Italian Air Force’s aerobatic team. It would become a combat squadron in wartime.

(e) The Italian Air Force in 1989 listed another x5 Squadrons’-worth of Spada SAM Launchers (CWIT-23) in its inventory. It’s possible that these were a third (unidentified) SAM Wing, but I think it more likely that they were in the process of replacing the Nike-Hercules system at that time.
