# Netherlands Orders of Battle and TO&Es 1980-1989 v3.3

By R Mark Davies for Battlefront: First Echelon

Additional Models & Photos by Johan van Ooij and with enormous gratitude and credit to the superb Netherlands Order of Battle 1985 website created by Hans Boersma

(a) The main fighting strength of the Koninklijke Landmacht (Royal Army) of the Netherlands was grouped into I (NL) Corps, which was the Netherlands' primary combat formation and was allocated to the left flank of NATO's British-led Northern Army Group (NORTHAG) in West Germany. On its left was the Danish-German LANDJUT Command and on its right was the German I Corps. However, only one regular Mechanised Brigade of 4th Infantry Division and the Corps HQ (plus some corps assets and other elements) were permanently deployed in West Germany. As a consequence, the German 3rd Panzer Division would be allocated in wartime from I (Ge) Corps in order to plug the gap and give time for the Dutch to mobilise. However, the Dutch had a very efficient mobilisation system that could mobilise its reservists and deploy the entire Corps into Germany within a few days. In addition to I (NL) Corps, there was the National Territorial Command assigned to home defence.

(b) While the Marine Corps was roughly a brigade in strength, it was not organised, trained or expected to fight as a unified brigade. Instead, the bulk of the Marine Corps was divided into three 'Amphibious Combat Groups' (battalions) and an independent Marine Infantry Company, designated 'Whiskey' Company. The 1st or 2nd Amphibious Combat Group, plus Whiskey Company (which was semipermanently assigned to the British 45 Royal Marine Commando), landing craft and naval assets would be assigned to the British 3 Commando Brigade, forming the 'UK-NL Landing Group'. There were also other Marine companies assigned to warships, port security and antiterrorism roles, which fall outside of the scope of these TO&Es.

I (NL) Corps (a)

**Royal Netherlands Army** 

## **National Territorial Command**

## **National Territorial Command**

ME CWNL-20 x3 Quad Anti-Aircraft MG Platoon (d)

(a) These two Security Infantry Battalions were specifically tasked with guarding HQ AFCENT (323rd Bn) and Schipol Airport (327th Bn).

**(b)** The 305th Commando Battalion was a light, mobile anti-Spetznaz unit. Its members were drawn from Commandotrained reservists who had served with the regular 104th Observation & Reconnaissance Company.

(c) The four Territorial Engineer Battalions were grouped under the 460th Engineer Group, which also included two Bridging Battalions and a unit of demolition divers known as the 901st Torpedo Company.

(d) These Independent AA Platoons would be distributed to other units within the Territorial Command.

peacetime, they were actually allocated to the Armoured Infantry Brigades in wartime.

(b) All Armoured Battalions of Armoured Brigades were equipped with Leopard 1NL (Leopard 1A1 in German terms) at the start of the 1980s, being upgraded between 1981 and 1985 with Leopard 1-V (Leopard 1A1A1 equivalent). However, from 1985, the tanks of 41st Armoured Brigade were replaced with Leopard 2A4.

(a) The Armoured Infantry Battalions of the 11th, 12th, 42nd, 51st and 52nd Armoured Infantry Brigades were equipped with YP-408 APCs. Those of the 43rd Armoured Infantry Brigade (as well as those of all three Armoured Brigades) were equipped with YPR-765 AIFVs. In 1987, the YP-408s were finally retired and all Armoured Infantry Battalions were then equipped with the YPR-765 AIFV.

CWNL-40

CWNL-24

CWNL-48

CWNL-41

(b) The Armoured Battalions of the 42nd, 52nd and 58th Armoured Infantry Brigades were still equipped with venerable Centurion Mk 5/2 tanks. In 1986 the 42nd Brigade upgraded to Leopard 2A4, while the other two upgraded to Leopard 1-V in 1987.

(c) Most Armoured Battalions started the 1980s equipped with Leopard 1NL tanks (Leopard 1A1 in German terms) and upgraded them to Leopard 1-V standard (Leopard 1A1A1 equivalent) between 1981 and 1985. However, Leopards of the 43rd and 53rd Armoured Infantry Brigades were upgraded to Leopard 2A4 from 1985 onward.

(b) From 1988: Replace x2 Infantry Battalions with x2 Armoured Infantry Battalion (765) (BG CWNL-09). However, these battalions were only equipped with the YPR-765 PRI .50 variant and not the more heavily-armed YPR-765 PRI 25.

(c) I'm not certain that the 101st Brigade had a Brigade Reconnaissance Platoon, though it seems reasonably likely that one would have been present following the 1988 upgrade.

#### BATTLEGROUP CWNL-05 Territorial Infantry Brigade 1980s

	MANOEUVRE ELEMENTS	
	ME CWNL-01 x3 or x4 Armoured Squadron (f)	
L	ME CWNL-02 x1 Reconnaissance Platoon	

(a) The Armoured Battalions of the 42nd, 52nd and 53rd Brigades were still equipped with venerable Centurion Mk 5/2 tanks for the first half of the decade. Therefore, replace Leopard in these units with: Centurion Mk 5/2 105mm Main Battle Tank CWNL-02

(b) The Armoured Battalions of all other brigades were equipped with Leopard 1NL (Leopard 1A1 in German terms) at the start of the 1980s, being upgraded between 1981 and 1985 with:

Leopard 1-V 105mm Main Battle Tank CWNL-04

(c) From 1985, replace the Leopards of 41st, 43rd & 53rd Brigades with:

Leopard 2A4 120mm Main Battle Tank CWNL-05
--

- (d) In 1986, replace the Centurions of 42nd Brigade with: Leopard 2A4 120mm Main Battle Tank CWNL-05
- (e) In 1987, replace the Centurions of 52nd Brigade with: Leopard 1-V 105mm Main Battle Tank CWNL-04

(f) All Armoured Battalions had x3 Armoured Squadrons until 1986, when the battalions of Armoured Infantry Brigades were expanded to x4 Squadrons after receiving their new tanks (Leopard 1-V or 2A4). However, the 3rd & 4th Squadrons in these expanded battalions were reduced in strength.

#### **BATTLEGROUP CWNL-07 Reconnaissance Battalion**

Command/Recce x1 M113 C&V 25 Recce Vehicle (a)

CWNL-15

MANOEUVRE ELEMENTS

ME CWNL-03 x3 Reconnaissance Squadron

(a) All M113 C&V ('Commando & Verkennings') had been converted from .50 Cal to 25mm armament during the late 1970s.

(a) The Armoured Infantry Battalions of the 11th, 12th, 42nd, 51st & 52nd Armoured Infantry Brigades were equipped with YP-408 wheeled APCs until 1987, when they were all converted to YPR-765 AIFVs and organised as per BG CWNL-09.

(b) Note that this is a towed weapon, not a self-propelled weapon like the West German Panzermörser 120 or American M106.

CWNL-23

CWNL-32

CWNL-56

CWNL-13

Infantry Brigade in 1988.

(a) The Armoured Infantry Battalions of the Armoured Brigades and the 43rd Armoured Infantry Brigade were equipped with the tracked YPR-765 AIFV as their primary vehicle, having converted to YPR-765 from the venerable AMX-VTT during the period 1976-1980. The YP-408-equipped 11th, 12th, 42nd, 51st & 52nd Brigades followed suit in 1987, as did two lorried battalions of the 101st

x6 YPR-765 PRAT TOW ATGM Vehicle

(b) Note that this is a towed weapon, not a self-propelled weapon like the West German M113 Panzermörser 120 or American M106.

(c) In the 101st Brigade from 1988, replace the 120mm Mortars and YPR-765 PRMR Mortar Tractors with:

M30 107mm Mortar	CWNL-46
M106 107mm Mortar Carrier	CWNL-47

(a) The 1st Marine Amphibious Combat Group was assigned to join the UK 3 Commando Brigade (thus forming the 'UK-NL Landing Force') in any 'Northern Option' assignment. The deployment of this force to Norway was seen as the most likely war-role and was one that both the Netherlands Marines and British Commandos trained for intensively. As a consequence, the 1st Amphibious Combat Group had large stocks of Arctic warfare equipment (including all the Bv-202s) pre-positioned in Norway.

(b) In peacetime, the main portion of the 2nd Marine Amphibious Combat Group was mainly stationed in the Netherlands Antilles. In wartime, it would be relieved by the reservist 3rd Amphibious Combat Group and would become the 'Southern Option' contingent for any operations by the UK-NL Landing Force in temperate or tropical waters.

(c) As discussed above, the 3rd Amphibious Combat Group would become the garrison force for the Netherlands Antilles during the build-up to war, thereby relieving the 2nd Amphibious Group in that role. However, the 3rd Combat Group was considerably weaker, having only x3 Marine Infantry Companies and no Support Company, so no Recce Platoon or combat support attachments. The bulk of the Group was formed from reservists.

(d) The 'Amphibious Section' was the élite special forces element of the Marine Corps, assigned to covert recce, sabotage and maritime counter-terrorism. The Section was normally split into three small 'Amphibious Groups', each of just six men, with each being assigned to a different Marine Amphibious Combat Group. The 1st Group was assigned to the 2nd Combat Group, while the 2nd Group was assigned to the 3rd Combat Group. The 3rd Group meanwhile, was assigned to the 1st Combat Group and was also affiliated to the British SBS, being also known as '7 (NL) SBS'.

(e) Stinger is only available from 1985 onward.

MANOEUVRE ELEMENT CWNL-03 **Reconnaissance Squadron** (a)

(a) The Squadron may alternatively be deployed as x3 platoonsized MEs of x2 M113 C&V 25 and x1 Tank. Designate one M113 C&V 25 in each platoon as the ME Commander.

(b) Sources differ, though it would appear that at least some units persisted with AMX-13/105 Light Tanks into the early 1980s. There was a plan in the late 70s/early 80s to replace them with YPR-765 PRAT tank-destroyers, though this plan doesn't seem to have been implemented, as the Reconnaissance Regiments were soon employing main battle tanks in this slot. May therefore replace the AMX-13/105 Light Tanks in the early 1980s with:

Leopard 1NL (1A1) 105mm Main Battle Tank (c) CWNL-03

(c) The 102nd and 104th Reconnaissance Battalions had a very slow programme of tank-upgrades, with roughly one squadron being upgraded every six months from 1985-87. May therefore replace the tanks in these battalions with: Le

eopard 1-V 105mm Main Battle Tank CW	'NL-04
--------------------------------------	--------

(d) In 1985, replace tanks in 103rd Reconnaissance Battalion with: Leopard 2A4 120mm Main Battle Tank **CWNI -05** 

(e) The 105th Reconnaissance Battalion was activated in 1984 without any tanks at all. However, tanks were finally delivered in 1985. so add:

Leopard 2A4 120mm Main Battle Tank CWNL-05

(a) Some reservist units (such as those in 5th Infantry Division) persisted in using AMX 105mm Model A self-propelled howitzers well into the 1980s, before these were finally replaced with M109.

(b) There were enough FOs in the battalion for each Armoured Squadron and Armoured Infantry Company ME in the Brigade to have its own dedicated FO.

(c) Modelling note: The YPR-765 PRCO-C5 Forward Observation Vehicle was fitted with a standard M113 cupola, NOT the larger M26 cupola as shown on the Team Yankee model, so use spare M113 cupolas instead (The YPR-765 PRCO-C2 Battery Command Vehicle used the M26 cupola).

(a) In 101st Infantry Brigade, increase to x3 FOs per Battery.

FIRE SUPPORT ELEMENT CWNL-05 SP Heavy Artillery Battalion (b)

> FIRE SUPPORT ELEMENT CWNL-06 x3 SP Heavy Artillery Battery (b)

Fire Support x2 M107 SP 175mm Howitzer (ab)

(a) One Heavy Artillery Regiment was equipped instead with M110A2 SP 203mm Howitzers and was nuclear-roled. This unit had only x2 Batteries, each with x1 M110A2 and was tasked solely with nuclear missions.

(b) In 1986: Replace all remaining M107 SP 175mm Howitzers with M110A2 SP 203mm Howitzers.

FIRE SUPPORT ELEMENT CWNL-08 x3 Territorial Field Artillery Battery **On-Table Attachment** x4 Forward Observer (a) CWNL-34 Transport/Recce

x4 Land Rover Light Utility (a) CWNL-41 Fire Support x3 M101 105mm Howitzer

(a) There were enough FOs in the battalion for each Territorial Infantry Company ME in the Brigade to have its own dedicated FO.

# **Royal Netherlands Air Force, 1980s**

Note that all RNLAF fast jet squadrons converted to F-16A Fighting Falcon (CWNL-38) during the period 1980-1991. I have therefore noted the year in which they converted to F-16 next to each squadron listing below:

<b>306 Squadron – x9</b> F-104G Starfighter (1983)	CWNL-39
311 Squadron – x9 F-104G Starfighter (1982)	CWNL-39
312 Squadron – x9 F-104G Starfighter (1985)	CWNL-39
313 Squadron – x9 NF-5A Freedom Fighter (1988)	CWNL-37
314 Squadron – x9 NF-5A Freedom Fighter (1991)	CWNL-37
315 Squadron – x9 NF-5A Freedom Fighter (1987)	CWNL-37
316 Squadron – x9 NF-5A Freedom Fighter (1991)	CWNL-37
<b>322 Squadron – x9</b> F-104G Starfighter (1980)	CWNL-39
<b>323 Squadron – x9</b> F-104G Starfighter (1981)	CWNL-39

Each battalion-sized battlegroup should have at least one FAC attached (CWNL-34), mounted in transport of a type appropriate to the unit (e.g. YP-408, M113, YPR-765 PRCO, Bv-202, M38A1 'Nekaf' Jeep or Land Rover). There was no specific FAC vehicle.
