

Oblique Template

As a unit advances or withdraws, it also may move to the left or right oblique. To oblique, all stands maintain their current facing and formation and move at an angle up to 45-degrees in one direction. Move distance is measured along the angle. A unit may oblique at any point during its advance or withdrawal. An oblique may not be combined with a wheel or march by the flank. A unit may either left or right oblique in a single phase, but not both.

A new oblique template is provided to help determine the angle and movement cost. The template has both left and right oblique markings. Place the base of the template along the front face of the unit, with the outside corner of the flank stand touching the starting point for the various oblique angles on the template. Next, move the formation along the selected angle. The movement cost is listed on the template.
