

Swedish Orders of Battle & TO&Es 1980-1989 v0.0

By R Mark Davies for *Battlefront: First Echelon*

This is an unfinished draft set of TO&Es for the core of the Swedish Army and Air Force during the Cold War, circa 1980-1989.

People have been pestering me for a while for these since QRF brought out the S-Tank and Pbv 302 APC, but I've had something of a headache pinning down the details of higher-level organisations such as Divisions, various odds and sods such as the numerous Jäger Battalions and the truly vast swathe of Swedish reserve and local defence units. Then it suddenly occurred to me that we in the main, generally just want to know about the regular core of an army and that's mostly all here.

So consider this 'Version 0.0' and happy gaming!

I'll update it to Version 1.0 once it's complete with all higher-level organisations and those pesky Jägers and Home Guardsmen.

Cheers,

Mark

(a) All four of the mainland Armoured Brigades (7th, 8th, 9th & 26th) conformed to the Type 63M organisation as shown here. However, the 18th Armoured Brigade, on the island of Gotland was designated as a 'Type G' brigade and had some very minor differences. The primary difference was that the Gotland Mechanised Infantry used WW2-era SKPF m/42 Armoured Trucks in lieu of Pbv 302 APCs.

(b) The 7th & 8th Armoured Brigades were equipped with Strv 103 (S-Tank). The 9th Armoured Brigade had Strv 101 (Centurion Mk 10) and/or Strv 102 (Centurion Mk 3 upgraded in Sweden to Mk 5 standard) – the Strv 101 were upgraded to Strv 105 standard in the late 1980s. The 26th Armoured Brigade was equipped with Strv 102, which were upgraded to Strv 104 standard in the late 1980s.

(c) The 18th Armoured Brigade in Gotland appears not to have had an Anti-Aircraft Company.

(d) Late 1980s: The Infantry may upgrade their LAWs to m/86.

(e) Late 1980s: The Infantry may upgrade all their weaponry and may therefore be replaced with:
 Infantry (Ak 5 rifle, Ksp 90 SAW) CWSW-33

(f) The 'Armoured' Howitzer Battalions organic to Armoured Brigades had towed 155mm Howitzers. The Howitzer Companies organic to Armoured Battalions had towed 105mm Howitzers. Aside from OP vehicles, they were not actually armoured!

(a) The 10th Mechanised Brigade was the only such formation in the Swedish order of battle and conformed to the Type 85 organisation, as shown here. However, there were several other independent Mechanised Battalions scattered about. In terms of organisation there was very little difference between this organisation and the Type 63M Armoured Brigade organisation. The only difference that we have been able to identify is that one of the Armoured Companies in each battalion was replaced with Ikv 91 Assault Guns.

(b) The Armoured Battalion listed here was actually designated as a 'Mechanised Battalion', though in reality was organised identically to an Armoured Battalion.

(c) The Strv 101 (Centurion Mk 10) Medium Tank was used by all three battalions.

(d) Late 1980s: The Infantry may upgrade their LAWs to m/86.

(fe) Late 1980s: The Infantry may upgrade all their weaponry and may therefore be replaced with:

Infantry (Ak 5 rifle, Ksp 90 SAW) CWSW-33

BATTLEGROUP CWSW-04

(a) The Norrlands Brigades were the Swedish Army's Arctic warfare specialists, equipped with large quantities of Bv-202 and Bv-206 over-snow vehicles, as well as skis and other essential cold-weather equipment, plus the training to operate effectively in such a harsh environment.

(b) Late 1980s: The Infantry may upgrade their LAWs to m/86.

(c) Late 1980s: The Infantry may upgrade all their weaponry and may therefore be replaced with:
Infantry (Ak 5 rifle, Ksp 90 SAW) CWSW-33

(d) The 15th Division in the Northern Military Area had two independent Armoured Battalions, equipped with the Strv 103 'S-Tank'.

FIRE SUPPORT ELEMENTS

 FIRE SUPPORT ELEMENT CWSW-03
x1 Brigade Howitzer Battalion

(a) The Type 77 Infantry Brigades, along with the Type 85 Norrland Brigades, were Sweden's main mobile infantry formations, capable of mounting a mobile defence and limited counter-attack capability. In 1988 the Type 77R Brigade organisation (BG CWSW-05) was introduced, which was very similar, though incorporated the new BILL anti-tank missile and made the brigade more of an anti-tank screening formation. However, it is not clear how many (if any) Type 77R Brigades were operational before the end of the Cold War.

(b) Late 1980s: The Infantry may upgrade their LAWs to m/86.

(c) Late 1980s: The Infantry may upgrade all their weaponry and may therefore be replaced with:

Infantry (Ak 5 rifle, Ksp 90 SAW)

CWSW-33

(a) The Type 77 Infantry Brigades, along with the Type 85 Norrland Brigades, were Sweden's main mobile infantry formations, capable of mounting a mobile defence and limited counter-attack capability. In 1988 the Type 77R Brigade organisation (BG CWSW-05) was introduced, which was very similar, though incorporated the new BILL anti-tank missile and made the brigade more of an anti-tank screening formation. However, it is not clear how many (if any) Type 77R Brigades were operational before the end of the Cold War.

(b) Late 1980s: The Infantry may upgrade their LAWs to m/86.

(c) Late 1980s: The Infantry may upgrade all their weaponry and may therefore be replaced with:

FIRE SUPPORT ELEMENTS

FIRE SUPPORT ELEMENT CWSW-05
x1 Infantry Howitzer Battalion

(a) The Type 66 Infantry Brigades, were Sweden's main defensive infantry formations, with only limited mobility. Standard Type 66 Brigades used civilian bicycles as their main form of mobility, while Type 66R Brigades used commandeered civilian tractors (with trailers) and trucks. Type 66M Brigades were more fortunate, having limited quantities of military softskins and Bv-202 over-snow vehicles. By the late 1980s, most (possibly all?) Type 66 Brigades seem to have been of Type 66M organisation.

(b) One source states that while Type 66M Brigades included an Assault Gun Company, Type 66 Brigades did not. The source doesn't mention Type 66R Brigades.

(a) Late 1980s: The Infantry may upgrade their LAWs to m/86.

(b) Late 1980s: The Infantry may upgrade all their weaponry and may therefore be replaced with:
Infantry (Ak 5 rifle, Ksp 90 SAW) CWSW-33

(c) The battalion Pioneer Platoons carried 400 anti-tank mines, with which to create a defensive screen in front of the battalion.

(d) In the two independent Armoured Battalions (S-Tank) assigned to 15th Division in the Northern Military Area, replace wheeled transport with:

Bv-202 Arctic Warfare Carrier (with MG) CWSW-16

(e) The Independent Armoured Battalions assigned to 15th Division had only **x1** Mechanised Infantry Company apiece. All other Armoured Battalions had **x2** Mechanised Infantry Companies.

(f) The 'Armoured' Howitzer Companies organic to Armoured Battalions had towed 105mm Howitzers. Aside from the OP vehicles, they were not actually armoured!

(a) At least one Mechanised Battalion had **x2** Armoured Companies and no Assault Gun Companies, so was simply organised as an Armoured Battalion and was 'Mechanised' in name and role only.

(b) Late 1980s: The Infantry may upgrade their LAWs to m/86.

(c) Late 1980s: The Infantry may upgrade all their weaponry and may therefore be replaced with:
Infantry (Ak 5 rifle, Ksp 90 SAW) CWSW-33

(d) The battalion Pioneer Platoons carried 400 anti-tank mines, with which to create a defensive screen in front of the battalion.

(e) The 'Armoured' Howitzer Companies organic to Mechanised Battalions had towed 105mm Howitzers. Aside from the OP vehicles, they were not actually armoured!

(a) Type 85 Norrlands Infantry Battalions were Arctic Warfare specialists and were fully equipped with Bv 206 over-snow vehicles, skis and sleds for conducting operations in frozen terrain.

(b) Late 1980s: The Infantry may upgrade their LAWs to m/86.

(c) Late 1980s: The Infantry may upgrade all their weaponry and may therefore be replaced with:
 Infantry (Ak 5 rifle, Ksp 90 SAW) CWSW-33

(d) The battalion Pioneer Platoons carried a large quantity of anti-tank mines, with which to create a defensive screen in front of the battalion.

(e) The battalion (or elements of it) may alternatively travel light, on skis. In which case, delete the Bv 206 transport. Troops may be replaced with Ski Troops (CWSW-34) when on the move (treat the same as bicycles, cavalry horses or motorcycles). All heavy weapons are equipped with sleds and can move at the same rate as ski troops. Bv 206 vehicles may also tow up to x4 units of ski troops/heavy weapons on snow – treat as Tank Riders in game terms, but they may not Rapid Advance or Displace.

(a) Type 77 Infantry Battalions had full motorisation and were designed to be able to conduct a mobile defence.

(b) May replace Battalion Commander's Tgb 11 with:
 Bv 206 Arctic Warfare Carrier (no MG) CWSW-17

(c) Late 1980s: The Infantry may upgrade their LAWs to m/86.

(d) Late 1980s: The Infantry may upgrade all their weaponry and may therefore be replaced with:
 Infantry (Ak 5 rifle, Ksp 90 SAW) CWSW-33

(e) The battalion Pioneer Platoons carried a large quantity of anti-tank mines, with which to create a defensive screen in front of the battalion.

(a) Type 77R Infantry Battalions had full motorisation and were designed to be able to conduct a mobile defence with the new BILL ATGM system.

(b) May replace Battalion Commander's Tgb 11 with:
 Bv 206 Arctic Warfare Carrier (no MG) CWSW-17

(c) The battalion Pioneer Platoons carried a large quantity of anti-tank mines, with which to create a defensive screen in front of the battalion.

(d) Note that the Recce Platoon formed part of a Type 77R Battalion's Mortar Company, whereas in other battalion types it was normally found as part of the Battalion HQ Company.

(a) Type 66M Infantry Battalions had limited motorisation. Type 66R Battalions meanwhile, used the same organisation, though relied upon commandeered civilian trucks, tractors and trailers. Type 66 Battalions again used the same organisation, but relied mainly upon civilian bicycles!

(b) May replace Battalion Commander's Tgb 11 with:
 Bv 202 Arctic Warfare Carrier (no MG) CWSW-16

(c) Late 1980s: The Infantry may upgrade their LAWS to m/86.

(d) Late 1980s: The Infantry may upgrade all their weaponry and may therefore be replaced with:
 Infantry (Ak 5 rifle, Ksp 90 SAW) CWSW-33

(e) The battalion Pioneer Platoons carried a large quantity of anti-tank mines, with which to create a defensive screen in front of the battalion.

(f) In Type 66 & Type 66R Battalions, replace transport with:
 Civilian Tractor and Trailer generic card
 Bicycles generic card

(a) In the two independent Armoured Battalions assigned to 15th Division and in the 7th & 8th Armoured Brigades, replace Strv 102 tanks with:

Strv 103 'S-Tank' 105mm Main Battle Tank CWSW-07

From 1987-88: May upgrade Strv 103 'S-Tank' to:
Strv 103C 'S-Tank' 105mm Main Battle Tank CWSW-08

(b) Mid-1980s (1985-1987, except in 26th Armoured Brigade): All Strv 102 tanks were upgraded. May therefore replace the Strv 102 tanks with:
Strv 102R 105mm Main Battle Tank CWSW-06

(c) Late 1980s in 26th Armoured Brigade: In addition to the upgrade programme undertaken by the rest of the Strv 102 fleet, the 26th Brigade's tanks were given even more advanced engines, creating a new variant of tank. May therefore replace with:
Strv 104 105mm Main Battle Tank CWSW-09

(d) Mid-1980s (1985-1987): All Strv 101 tanks were upgraded. May therefore replace the Strv 101 tanks with:
Strv 101R 105mm Main Battle Tank CWSW-04

(e) Late 1980s: The Infantry may upgrade their LAWs to m/86.

(f) Late 1980s: The Infantry may upgrade all their weaponry and may therefore be replaced with:
Infantry (Ak 5 rifle, Ksp 90 SAW) CWSW-33

(g) In Gotland (18th Armoured Brigade), replace Pbv 302 APC with:
m/42 SKPF Armoured Truck CWSW-15

(h) Somewhat bizarrely, during peacetime the Company Commander did not have a dedicated tank and instead had a Tgb 11 Jeep! I can't find anything official, but Swedish veterans tell me that during mobilisation, the Company Commander would take over one of the Platoon Commander's tanks, as shown here.

(a) Late 1980s: The Infantry may upgrade their LAWs to m/86.

(b) Late 1980s: The Infantry may upgrade all their weaponry and may therefore be replaced with:
Infantry (Ak 5 rifle, Ksp 90 SAW) CWSW-33

(c) In Gotland (18th Armoured Brigade), replace Pbv 302 APC with:
m/42 SKPF Armoured Truck CWSW-15

(d) In the two Independent Tank Battalions assigned to 15th Division in the Northern Military Area, replace all Pbv 302 with:
Bv 202 Arctic Warfare Carrier (with MG) CWSW-16
Bv 206 Arctic Warfare Carrier (with MG) CWSW-17

(a) Late 1980s: The Infantry may upgrade their LAWs to m/86.

(b) Late 1980s: The Infantry may upgrade all their weaponry and may therefore be replaced with:
Infantry (Ak 5 rifle, Ksp 90 SAW) CWSW-33

(c) Somewhat bizarrely, during peacetime the Company Commander did not have a dedicated tank and instead had a Tgb 11 Jeep! I can't find anything official, but Swedish veterans tell me that during mobilisation, the Company Commander would take over one of the Platoon Commander's tanks, as shown here.

(a) 1980-1984: Some Type 66/66R/66M Brigades were still using obsolete equipment during this period. May therefore replace the lkv 91s with:

Strv 74 75mm Medium Tank CWSW-02

(b) Late 1980s: The Infantry may upgrade their LAWs to m/86.

(c) Late 1980s: The Infantry may upgrade all their weaponry and may therefore be replaced with:

Infantry (Ak 5 rifle, Ksp 90 SAW) CWSW-33

(d) In Type 85 Norrlands Brigades: Replace truck with:

Bv 206 Arctic Warfare Carrier (with MG) CWSW-17

(e) Somewhat bizarrely, during peacetime the Company Commander did not have a dedicated tank and instead had a Tgb 11 Jeep! I can't find anything official, but Swedish veterans tell me that during mobilisation, the Company Commander would take over one of the Platoon Commander's tanks, as shown here.

(a) In Armoured Brigades from 1984 (in practice the organisational change generally didn't happen until 1988/89): Replace the entire company with the following:

(a) Late 1980s: The Infantry may upgrade their LAWs to m/86.

(b) Late 1980s: The Infantry may upgrade all their weaponry and may therefore be replaced with:
Infantry (Ak 5 rifle, Ksp 90 SAW) CWSW-33

(c) In Gotland (18th Armoured Brigade), replace Pbv 302 APC with:
m/42 SKPF Armoured Truck CWSW-15

(a) May replace RBS-69 SAM Teams with:
RBS-70 SAM Team CWSW-47

(b) Late 1980s in mainland Armoured Brigades: Replace the entire company with the following organisation:

- (a) Late 1980s: The Infantry may upgrade their LAWs to m/86.
- (b) Late 1980s: The Infantry may upgrade all their weaponry and may therefore be replaced with:
Infantry (Ak 5 rifle, Ksp 90 SAW) CWSW-33
- (c) The company (or elements of it) may alternatively travel light, on skis. In which case, delete the Bv 206 transport. Troops may be replaced with Ski Troops (CWSW-63) when on the move (treat the same as bicycles, cavalry horses or motorcycles). All heavy weapons are equipped with sleds and can move at the same rate as ski troops. Bv 206 vehicles may also tow up to x4 units of ski troops/heavy weapons on snow – treat as Tank Riders in game terms, but they may not Rapid Advance or Displace.

- (a) Late 1980s: The Infantry may upgrade their LAWs to m/86.
- (b) Late 1980s: The Infantry may upgrade all their weaponry and may therefore be replaced with:
Infantry (Ak 5 rifle, Ksp 90 SAW) CWSW-33

- (a) Late 1980s: The Infantry may upgrade their LAWs to m/86.
- (b) Late 1980s: The Infantry may upgrade all their weaponry and may therefore be replaced with:
Infantry (Ak 5 rifle, Ksp 90 SAW) CWSW-33

(a) Late 1980s: The Infantry in Type 66M Brigades (but not Type 66R and probably not Type 66) may upgrade their LAWs to m/86.

(b) Late 1980s: The Infantry in Type 66M Brigades (But not Type 66R and probably not Type 66) may upgrade all their weaponry and may therefore be replaced with:
Infantry (Ak 5 rifle, Ksp 90 SAW) CWSW-33

(c) The only motor transport organic to a Type 66M Company is x1 Bv 202 over-snow vehicle. However, they could also utilise the battalion's pool of motor transport elements. Additionally, the Swedish Army held roughly a battalion's-worth of wheeled APCs for units engaged on UN peacekeeping duties. These could also be used to motorise some units in defence of the country. May therefore add the following transport:

x4 m/42 SKPF Armoured Truck CWSW-15
Or from the late 1980s with:
x4 PtgB XA-180/185 Wheeled APC CWSW-14

(d) In Type 66 and Type 66R Battalions: Delete the Bv 202 and add various commandeered civilian transport and bicycles.

(a) Late 1980s: The Infantry may upgrade their LAWs to m/86.

(b) Late 1980s: The Infantry may upgrade all their weaponry and may therefore be replaced with:
Infantry (Ak 5 rifle, Ksp 90 SAW) CWSW-33

(c) The company (or elements of it) may alternatively travel light, on skis. In which case, delete the Bv 206 transport. Troops may be replaced with Ski Troops (CWSW-63) when on the move (treat the same as bicycles, cavalry horses or motorcycles). All heavy weapons are equipped with sleds and can move at the same rate as ski troops. Bv 206 vehicles may also tow up to x4 units of ski troops/heavy weapons on snow – treat as Tank Riders in game terms, but they may not Rapid Advance or Displace.

(a) Late 1980s: The Infantry may upgrade their LAWs to m/86.

(b) Late 1980s: The Infantry may upgrade all their weaponry and may therefore be replaced with:
Infantry (Ak 5 rifle, Ksp 90 SAW) CWSW-33

(c) In Type 77R Brigades: Replace 90mm Recoilless Rifles and transport with:
RBS-56 BILL ATGM Team CWSW-44
Tgb-11 Light Utility Vehicle (with MG) CWSW-20

(a) Late 1980s: The Infantry may upgrade their LAWs to m/86.

(b) Late 1980s: The Infantry may upgrade all their weaponry and may therefore be replaced with:
Infantry (Ak 5 rifle, Ksp 90 SAW) CWSW-33

(a) These units were not 'armoured' in the sense of being equipped with self-propelled, armoured guns. The 'armoured' title refers to the fact that they supported armoured units. The only armoured vehicles in the unit are the Epbv 3022 OP vehicles.

(a) Transport may be replaced in some units (particularly in the north) with:
 Bv 202 Arctic Warfare Carrier (with MG) CWSW-16

(a) FO's transport may be replaced in some units (particularly in the north) with:
 Bv 202 Arctic Warfare Carrier (with MG) CWSW-16

(a) FO's transport may be replaced in some units with civilian transport or (particularly in the north) with:
 Bv 202 Arctic Warfare Carrier (with MG) CWSW-16

(a) Transport may be replaced in some units (particularly in the north) with:
 Bv 202 Arctic Warfare Carrier (with MG) CWSW-16

(a) Transport may be replaced in some units (particularly in the north) with:
 Bv 202 Arctic Warfare Carrier (with MG) CWSW-16

(b) Somewhat unusually, the Recce Platoon of a Type 77R Infantry Battalion was subordinate to the Battalion Mortar Company. The Recce Platoon may form a separate platoon-sized ME. Designate **x1** Infantry Unit (or the FO if attached) as the Platoon Commander.

(a) There were initially **x2** such battalions in the 15th Division, each with **x3** Batteries. In the late 1980s they were reorganised as **x3** Battalions, each of **x2** Batteries. Note that these were the only self-propelled artillery units in the Swedish Army and all were grouped in the Northern Military Region, under the command of 15th Division.

(b) The *Bankannon* 1A was a unique weapon and held the world record for the fastest-firing artillery piece, being able to put 15 rounds on the target in 45 seconds! This was achieved through a magazine-feed: the gun had two seven-round magazines and a 15th round would be in the breech. In game terms, the *Bankannon* Battery can thicken its own concentrations, giving an extra +1 Thickening bonus at the player's discretion. However, it must then cease fire for a turn while it reloads.

(a) Transport may be replaced in some units (particularly in the north) with:
 Bv 202 Arctic Warfare Carrier (with MG) CWSW-16
 Note that the full range of motor transport would only be found in Type 66M Brigades. Companies belonging to Type 66 Brigades might only have partial mobility, while in Type 66R Brigades they might be static or reliant upon commandeered civilian transport.

(b) In Type 66R Brigades: Replace 120mm mortars with:
x4 8cm Granatkastare m/46 or m/84 CWSW-48

Swedish Air Force (Wartime Organisation)

1st Air Wing (a)

73 Attack Squadron with x9 AJ-37 Viggen?	CWSW-54
104 Fighter Squadron (OCU) with x9 SK-35C Draken	CWSW-56
153 Attack Squadron (OCU) with x9 SK-37 Viggen	CWSW-54
171 Fighter Squadron with x9 J-35D Draken (1982/83?)	CWSW-56
x25 SK-61A/B Trainer/AOP	CWSW-62
x10 FPL-61C AOP (transferred from Army to Air Force in 1989)	CWSW-61

(a) In wartime, 1st Air Wing would take control of all ground-attack and close air support squadrons. These would primarily be based in the north of the country, where it was expected that they would meet a Soviet invasion.

(b) These units converted to JA-37 Viggen Fighter (CWSW-55) during the year shown in parentheses.
